

SQL server Database Developer

Exciting Opportunity for passionate Developers who want to work in a customer-oriented software company.

The position involves/requires the following:

Customer-oriented

T-SQL Programming (SQL Server 2005).

Stored Procedures, Triggers, Functions

Good communication and interpersonal skills required.

Good documentation skills

Multitasking between projects.

Good Analytical and problem-solving skills required

Salary commensurate with knowledge, passion and experience.

About the Company:

We are a software company serving up a custom application as an Application Service Provider. We have ASP 3.0 and ASP.Net 2.0 throughout our system. We are on SQL Server 2005. We are a mission critical software to our clients offering eCommerce, fulfillment, sales commissions (aka payroll), inventory controls, warehouse packslips, etc.

Basically, the whole gamut of pushing product from purchase to consumer.

The database group does 10% DBA work, and 90% SQL developer work. This position involves extensive programming using Stored Procs (TSQL), functions and triggers. This position requires a lot of analytical and problem-solving skills and involves the entire software development lifecycle.
